- Validation processes as strong as Verisign and far stronger than GeoTrust
  
- 30 day money back guarantee
  
- 30 day free replacement and reissue policy
  
- Varying levels of warranty for specific site needs

#### How to Order

To order your Secure Certificate, you must be able to provide a Certificate Signing Request for your website or webserver. This means that your hosting must already be set up on your server.

In addition, your site must have a dedicated IP Address. (It can still be virtually hosted on a server with other sites on a different IP address).

If your website or server is hosted elsewhere, please contact your host to obtain a CSR, or you may be able to generate a CSR from your hosting or server control panel.

Certificates issued to individuals require identification from that individual in the form of a valid drivers license or passport. If the individual is an existing WebFarm customer, this requirement is waived as a commercial relationship already exists.

Certificates issued to a business or corporate body require the registration number of the company or corporate body. This will be verified with the Companies Office.

To request an InstantSSL certificate please order here or email [accounts@webfarm.co.nz](mailto:accounts@webfarm.co.nz). Be sure to include the domain name you want the certificate for in the email.

#### InstantSSL Data Sheet

256 bit SSL Certificates designed for securing intranets, extranets and web sites. Trusted by over 99.3% of current Internet users, Instant SSL Certificates are an ideal and low cost way of securing your webserver.

#### Fully validated

All Instant SSL products provide 256 bit (double industry standard) validation of both the domain name ownership and the legitimacy of the company as a legal entity. This is done even if the certificate is intended for internal use only and maximizes customer confidence in the security of the website. Without sufficient validation SSL certificates are simply encryption certificates, so weak validation undermines why a CA must be a trusted entity - why should companies pay for an untrustworthy certificate that consumers inadvertently trust?

#### Fast issuance without the compromise of quality

Thanks to the revolutionary capabilities of IdAuthority, the identity assurance provider, the majority of Instant SSL Certificates can be issued instantly but without the need to compromise the level of validation. The result is a quickly issued yet trusted Certificate that does not undermine consumer confidence with the SSL protocol.

#### Trusted by all popular browsers

Your browser ubiquity is a key element when choosing an SSL provider. Instant SSL is inherently trusted by over 99% of the current Internet population. This makes Instant SSL as equally trusted as more expensive Certificates from Verisign and Thawte.

#### 30 day refund & reissue policy

Provided as standard, at no charge, on all products in the Instant SSL range. This allows for customers not to be penalized for making mistakes when submitting certificate requests.

#### Free TrustLogo

Instant SSL Certificates comes with a FREE TrustLogo worth \$170. Providing your customers with real-time identity assurance through convenient "point to verify" technology, TrustLogo enhances trust and confidence in your online identity and gives customers the confidence to buy from your site.

## Cost-effective pricing

Instant SSL remains the only low cost, fully validated, and fully supported SSL Certificate available today. To help customers avoid the hassle of renewing every year, we also offer discounted 2 and 3 year Certificates.
